Task overview

Remote devices and systems

- Video surveillance systems
- House automation systems
- -Security and warning systems

Existing approaches

"Ad hoc" native mobile applications

SMS/MMS interfaces

Web/WAP interfaces

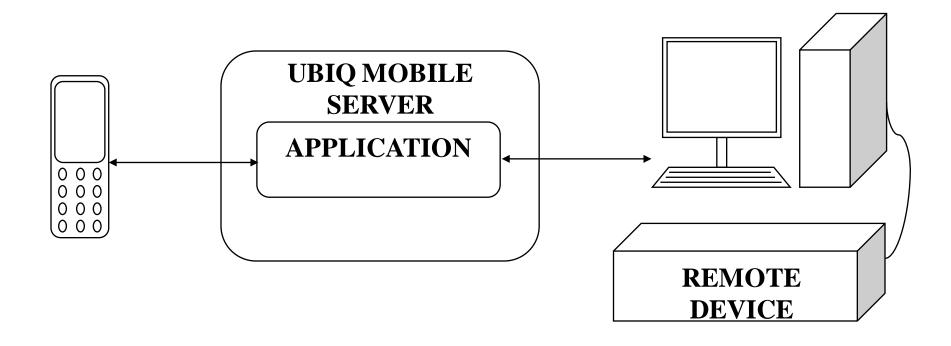

Ubiq Mobile Platform

- Encapsulation of most mobile-specific technical details
- Terminal architecture
- User session persistence
- Energy saving "standby" mode
- Support of alert signals

- Relatively static character of UI
- Inability to work offline

The general model

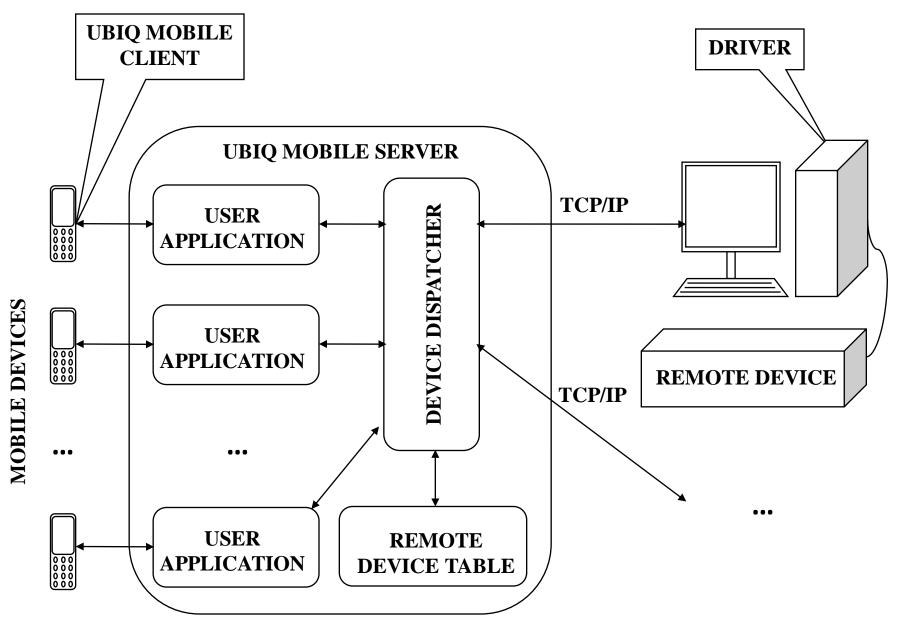

Common features

- Information exchange in both directions
- Remote system persistent mode
- Ability for the user to connect to the system from mobile device at any time
- Support of alert signals

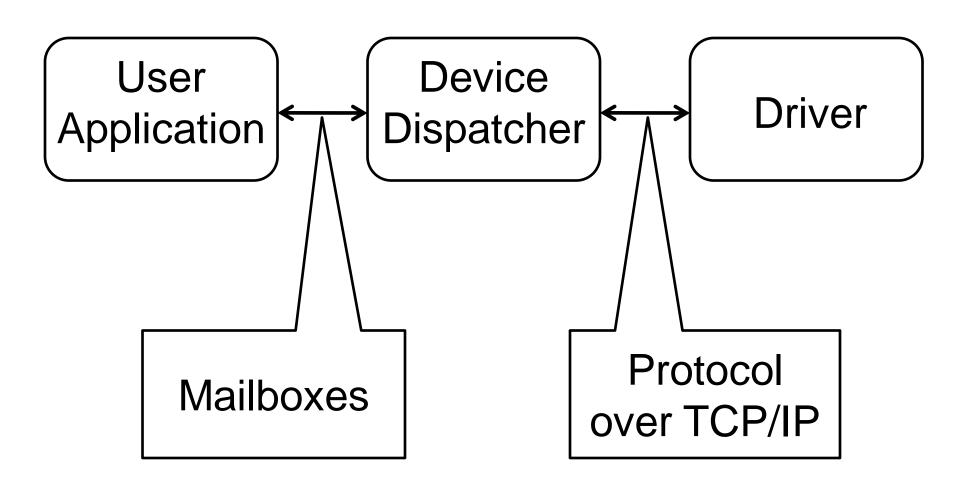

Functions of webcam service

- Acquiring static images from the webcam and displaying them on the screen of mobile device
- Setting value of interval
- Ability to stop/resume image transfer

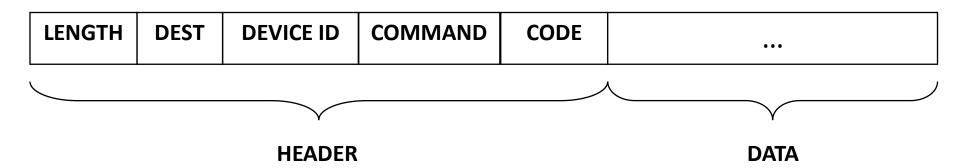

Inter-component communication

Command format

- Length length of the whole command
- Dest recipient (destination) of the command
- Device ID registration code of the device
- Command command code
- Code auxiliary field

Categories of commands

- General commands
 - Registration Request
 - Data Request
 - Error messages

- Device-dependent commands
 - Set Interval
 - Get Image
 - Send Image

Current status

α- version of demo webcam service

Adding new functionality

Further plans

- Support "multiple devices multiple users" working mode
- Universal class library for all deviceindependent components
- Structural pattern

Thank You!
