

**6<sup>th</sup> Fruct Seminar 2009**

# Context Mobile Electronic Personality

W. Oyomno, P. Jäppinen, E. Kerttula

05.11.2009

LAPPEENRANTA  
UNIVERSITY OF TECHNOLOGY

# Outline

1. Background

2. Motivational concerns

3. Vulnerabilities & mitigation

4. Conclusion

# Background

- Context information - Enriching information about an entities prevailing situation e.g. location, activity, role, company
- Personal information - set of all data associated with a specific individual - meaning only in how it associates/differentiates
- Personal trusted devices – evolution of mobile device to offers strong authentication of the user for number of services
- Privacy - claim to determine when, how, and to what extent information about them is communicated to others

# Motivational concerns

- Multiple sensors in mobile terminals
- Proliferation of mobile computing
- Ease to compose / disseminate services
  - 3 Service spheres
  - Societal transformation – post9/11
  - Information age participation – trade personal information
- Merging service spheres & new business models

# Motivational concerns ...

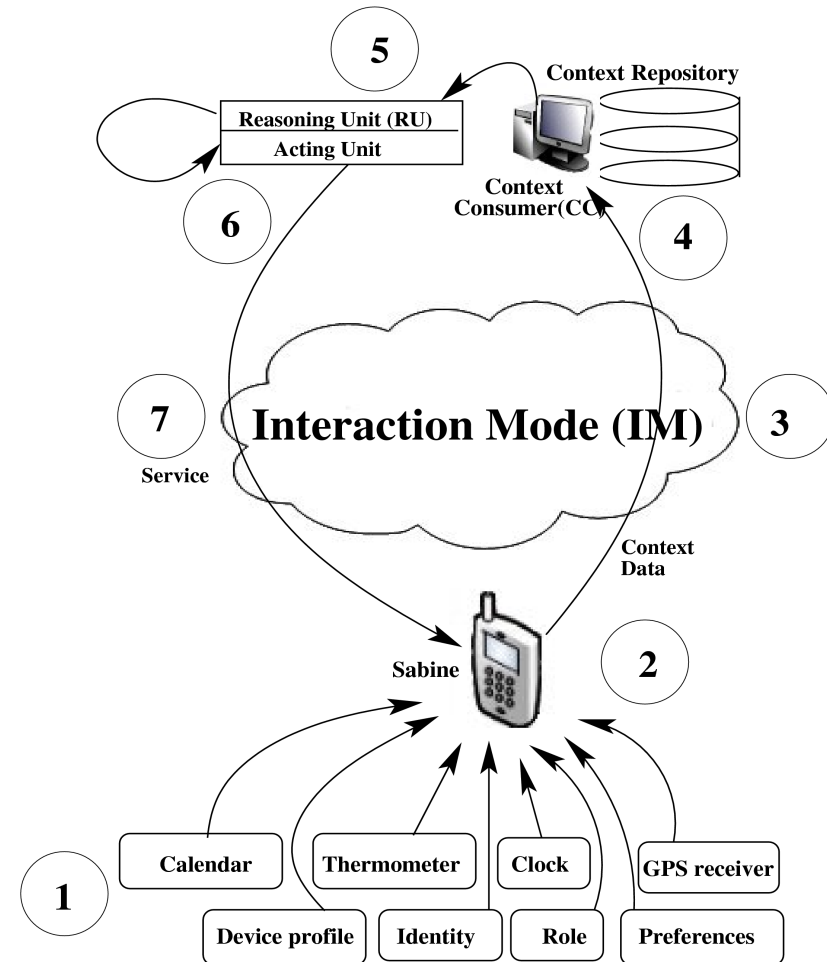

- Scattering of PI
- Diminished control over PI collection/use - re-purpose
- Trade-off, harmless, lone-information pieces
- Compounding *context + PI + service character*
  - Exposes “the deep truth”
- Privacy leaks in using context-aware services
  - Surveillance, identity thefts, falsification ...

# Vulnerabilities & mitigation

- Acquisition & representation leaks - *in-train, with-mike, where*
- Interaction leaks – *Eavesdroppers, header mining - not-home*
- Caching & retention vulnerabilities – *how, duration*
- Usage & disposal leaks - *3<sup>rd</sup> party processing*
- PI chain of custody & context life cycle

# Vulnerabilities & mitigation ...

- Key privacy questions
  - Private info piece & with whom are they associated
  - Withheld from whom
  - Benefits & in whose interest?

# Use-case & privacy modelling

Personal server

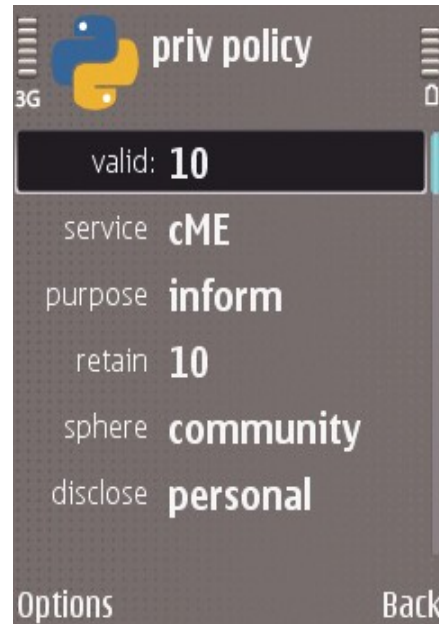

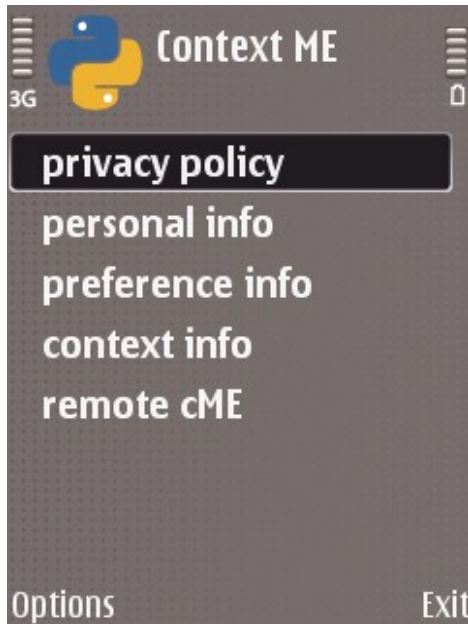

- Information screen
  - local preference provision (a)
  - remote personal server (a+b+c)
  - Personal assistance (a+d)

# Privacy modelling

## Privacy policies

```
<policy:detail="privacy policy">
  <policy:policy_head="introduction">
    <policy:policy_use="information"/>
    <policy:policy_owner="resto-loco"/>
    <policy:policy_validity="indefinite"/>
  </policy:policy_head>
  <policy:policy_part="rule 1">
    <policy:info_request>
      <policy:value="name"/>
      <policy:value="address"/>
      <policy:value="meal"/>
    </policy:info_request>
    <policy:value="info_purpose">
      <policy:value="restaurant"/>
    </policy:info_purpose>
    <policy:info_retention="string">
      <policy:value="6 hours"/>
    </policy:info_retention>
    <policy:info_benefit="string">
      <policy:value="preferred meal"/>
    </policy:info_benefit>
    <policy:disclose_sphere="string">
      <policy:value="community"/>
    </policy:disclose_sphere>
  </policy:policy_part>
</policy:detail>
```

# Privacy modelling ...

## Personal server

- Single access tickets
- S/KEY mechanism

## ME - Personal Server

Remote Control - ME

# Conclusion

- Overview of context-awareness & PI in services
- How & why it is reason to be concern
- Expressed the complexity with mitigation
  - Privacy paradox, UI
- Privacy preserving implementations
- Contributions/critics/discussions/suggestions
